Disclaimer

This document has been produced to benefit the community. Carilion Clinic encourages use of this report for planning purposes and is interested in learning of its utilization. Comments and questions are welcome and can be submitted to Carilion Clinic Community Health & Outreach at communityoutreach@carilionclinic.org.

Members of the Project Management Team reviewed all documents prior to publication and provided critical edits. Every effort has been made to ensure the accuracy of the information presented in this report; however, accuracy cannot be guaranteed. Members of the Giles County Area Community Health Assessment Team cannot accept responsibility for any consequences that result from the use of any information presented in this report.

Acknowledgements

Success of the 2018 Giles County Area Community Health Assessment (GCACHA) was due to the strong leadership and participation of its Project Management Team, the Project Support Team, members of Giles County FOCUS (FOCUS on Communities Utilizing Services), and the Community Health Assessment Team. Thank you to all of the community members who participated in the Community Health Survey and focus groups.

Members of these teams included:

Project Management Team

Project Director: Kristie Williams, Carilion Giles Community Hospital– VP

Project Director: Shirley Holland, Carilion Clinic– VP Planning and Community Development

Project Manager: Aaron Boush, Carilion Clinic– Community Health & Outreach Manager

Project Manager: Amy Michals, Carilion Clinic– Community Health & Outreach Analyst

Project Manager: Stephanie Spencer, Carilion Giles Community Hospital – Health Educator

Project Partner: Jeff Dinger, Giles County– Special Projects Manager

Project Support Team

Carilion Clinic Community Health & Outreach Intern: Rohan Kaushal

Carilion Clinic Community Health & Outreach Intern: Devki Patel

Carilion Clinic Community Health & Outreach Intern: Emily Skywark

Carilion Clinic Carilion Direct

Volunteer Focus Group Facilitators and Scribes: Jeff Dinger, Stephanie Spencer

Giles County FOCUS

The Giles County FOCUS Program is a formalized network of service providers that interact extensively with underserved Giles citizens. Through “focused” and coordinated service provision; addressing the physical, educational and economic well-being of individuals, families and communities, FOCUS elevates the status of their human condition(s).

The mission of FOCUS is to lead positive social change for families and individuals living in Giles County through the coordination of advocacy, information, opportunity and community involvement. Its vision is three fold: that every child is provided relationships to help them achieve his/her greatest potential and participate in and contribute to the community; that every parent is provided relationships to help them improve the quality of life for their families; and that every adult is provided the relationships to help them become responsible, participating citizens.

Community Health Assessment Team (CHAT)

Carilion Clinic's CHAs are community-driven projects and success is highly dependent on the involvement of citizens, health and human service agencies, businesses, and community leaders. Community stakeholder collaborations known as "Community Health Assessment Teams" (CHAT) lead the CHA projects. The CHATs consists of health and human service agency leaders, persons with special knowledge of or expertise in public health, the local health department, and leaders, representatives, or members of medically underserved populations, low-income persons, minority populations, and populations with chronic disease. In the Giles County area, FOCUS serves as the CHAT and additional key community leaders are invited to participate.

CHAT Members

This list includes members that attended 50% (2) or more of the CHAT meetings.

Name	Organization	Area of Expertise
Michelle Ballard	Monroe County Health Centers	Healthcare Admin. & Operations
Aaron Boush	Carilion Clinic	Hospital/Community Health
Juli Dellorso	NRV Cares	Preventing Child Abuse & Neglect
Mona DiGiulian	NRV CARES	Child Abuse/Neglect

Executive Summary

Carilion Clinic, the New River Health District, and FOCUS partnered to conduct the 2018 GCACHA. Together with partners, we are committed to the essential work of improving and maintaining the health of our communities. It is important to assess the health concerns of each community periodically to ensure that current needs are being addressed. A Community Health Assessment (CHA) every three years will uncover issues, indicate where improvement goals are needed, and track and promote progress in key areas, so that there is demonstrated, ongoing improvement. The work of conducting this CHA and the public availability of its findings is intended to enable the community to effectively plan the vital work of maintaining and improving health.

The finding of the 2018 GCACHA revealed 10 priority health-related issues in the community, identified by the CHAT after review of the data collected.

1. Alcohol and drug use
2. Child abuse / neglect
3. Transportation / transit system
4. Poor diet
5. Access to mental / behavioral health services
6. Access to specialty care (general)
7. Lack of health literacy / lack of knowledge of healthy behaviors
8. Access to substance use services
9. Culture: healthy behaviors not a priority
10. Lack of exercise

This report contains the findings of the 2018 GCACHA, including primary and secondary health and social determinant data on the service area and specific populations.

Description of the Community

The Giles County area, including Giles County, Virginia and Monroe County, West Virginia is the service area for the GCACHA. Giles County is a picturesque region of Appalachian America, with mountainous terrain, cliffs, rivers and streams. It is part of the New River Valley, which includes the counties of Floyd, Giles, Montgomery (including the towns of Christiansburg and Blacksburg), and Pulaski and the independent City of Radford. The County is rural and topographically isolated with 48.6 persons per square mile compared 202.6 persons per square mile in Virginia as a whole¹. It is a part of the New River Valley Planning District (Health Planning District 4) and is commonly referred to as Rural Appalachia². The area is bordered on the south by the Blue Ridge Mountains and the north by the Alleghany Mountains. One of the oldest rivers in America, the New River, runs through this region³.

The counties of Summers, Monroe, and Mercer, West Virginia border Giles County to the north, northwest. In addition, the County is bordered by the Virginia counties of Craig (east); Montgomery (southeast); Pulaski (south); and Bland (west).

Giles County is approximately 356 square miles⁴. The area is comprised of nine towns and is delineated by three voting districts: Pembroke, Eggleston, and Newport (Eastern District); Pearisburg, Staffordsville, and White Gate (Central District); and Glen Lyn, Rich Creek, and Narrows (Western District). Of these towns, Pearisburg, Narrows, Glen Lyn, and Rich Creek are federally designated as rural census tracts⁵. Pearisburg is the County Seat. In terms of governance, Giles County is governed by a County Board of Supervisors that controls the county budget. It is the site of the majority of health and human services available to the residents of Giles County⁶.

Mountains characterize the geography of Giles County. Many of the rural roads are unpaved and steep, with the highest peak at 4,348 above sea level. Much of the County consists of national forest. Giles County achieved major motion picture fame by serving as the geographic backdrop in the 1987 Hollywood blockbuster, "Dirty Dancing." The vacation lodge where the movie was filmed is one of the County's largest seasonal employers⁷.

Under the peak of Angel's Rest and surrounded by the beautiful mountains of Pearisburg, VA, lies Carilion Giles Memorial Hospital. For more than 50 years, this hospital has served the residents, neighbors, and visitors of Giles County. In 2002, CGCH was granted a government designation of Critical Access in a rural setting and today it is one of the leading hospitals of this kind in the nation.

⁶ Giles County, Virginia's Mountain Playground. <http://virginiasmtnplayground.com>

⁷ Giles County, A Rich History. <http://virginiasmtnplayground.com/history/>

Secluded in the Allegheny Highlands, Monroe County was separated from Greenbrier County, West Virginia in 1799, where its economic basis has been farming and timber harvesting ever since⁸. Monroe has a population of 13,402 with the population per square mile of 28.6 and has 472.75 square miles of land⁹.

Community Demographics

The 2018 GCACHA revealed differences in size and population and significant disparities both in health and in social determinants. The 2012-2016 American Community Survey (ACS) found the total population of the counties of Giles and Monroe to be 16,871 and 13,496¹⁰. For Giles County, the ACS predicts positive future population change at 2.2% compared to the Commonwealth of Virginia at 9.2%. Median age ranges from 43.6 Giles County to 47.0 in Monroe County¹¹. The ACS finds that both areas have a larger percentage of the population that is White than in the Commonwealth of Virginia as a whole. In Giles County, 96.7% of the population is White and 2.5% of the population is Black¹².

All of Giles County is a designated Medically Underserved Area (MUA) and a Health Professional Shortage Area (HPSA) for primary care, dental and mental health professionals¹³.

Assessment Service Area

The service areas for Carilion Clinic's Community Health Assessments are determined by at least 70% of unique patient origin of the hospital in each respective market. There is a focus placed on areas that are considered MUAs and Health Professional Shortage Areas (HPSAs).

Carilion Giles Community Hospital is located in Giles County, Virginia. In fiscal year 2017, CGCH served 8,811 unique patients. Patient origin data revealed that during this year, 88.57% of patients served by CGCH lived in the following localities:

- Giles County, VA (68.41%)
- Monroe County, WV (20.16%)

Existing Resources

Giles County is part of the New River Valley, a region flush with resources including food, health and human services, arts and culture and outdoor amenities. Health and human service organizations work to reduce the disparities in access to care and access to resources that still exist for many residents of the region. Please see Appendix 7 for a list of community resources serving Giles County.

Carilion Giles Community Hospital

Carilion Giles Community Hospital (CGCH) is a modern, 25-bed Critical Access hospital, offering emergency services recognized nationally for quality and patient satisfaction in addition to high-quality inpatient care and an extended care recovery program (Swing Bed) that gives eligible patients an opportunity to grow stronger before going home. The main entrance serves as the access point for all walk-in patients needing emergency care, diagnostics, rehabilitation and other outpatient services. CGCH works to bring new services to the community as the need is identified¹⁴.

CGCH is part of Carilion Clinic, a not-for-profit health care organization based in Roanoke, Virginia. It is mission-driven, focusing everyday on improving the health of the communities they serve. Through a comprehensive network of hospitals, primary and specialty physician practices, wellness centers, and other complementary services, quality care is provided close to home for nearly 1 million Virginians. With an enduring commitment to the health of our region, we also seek to advance care through medical education and research, helping our community stay healthy and inspire our region to grow stronger.

Community Health Assessment Process

Method

Carilion Clinic, the New River Health District, and FOCUS partnered to conduct the 2018 GCACHA.

A 19-member Community Health Assessment Team (CHAT) oversaw the planning activities. The service area included those living in the counties of Giles (VA) and Monroe (WV). We strive to target the underserved/vulnerable populations disproportionately impacted by the social determinants of health, including poverty, race/ethnicity, education, and/or lack of insurance.

Beginning in October 2017, primary data collection included a Community Health Survey, focus groups with key stakeholders and providers and focus groups with target populations. Secondary data collected include demographic and socioeconomic indicators as well as health indicators addressing access to care, health status, prevention, wellness, risky behaviors and the social environment.

¹⁴Carilion Giles Community Hospital. Retrieved from: <https://www.carilionclinic.org/locations/carilion-giles-community-hospital>

Collaboration

In the Giles County area, FOCUS has served as the convening partnership of health and human service organizations. CGCH has partnered with the New River Health District and FOCUS to conduct the 2018 Community Health Assessments and respond to identified community health priorities. CGCH participates regularly on FOCUS and recruited CHAT members through FOCUS for the 2018 GCACHA. CGCH, FOCUS and the New River Health District partnered in the planning and execution of the 2018 GCACHA and will continue to partner and convene others to participate in strategies to address identified needs.

Community Health Improvement Process

Carilion Clinic's Community Health Improvement Process was adapted from Associates in Process Improvement's the Model for Improvement and the Plan-Do-Study-Act (PDSA) cycle developed by Walter Shewhart¹⁵. It consists of five distinct steps: (1) conducting the CHA, (2) strategic planning, (3) creating the implementation strategy, (4) program implementation, and (5) evaluation. This cycle is repeated every three years to comply with IRS requirements. Each step in the process is explained below.

Step 1: Conduct Community Health Assessment

The first step in the Community Health Improvement Process is to conduct a Community Health Assessment. Led by a Community Health Assessment Team (CHAT), the assessment involves collection of primary and secondary data from numerous sources. Primary data include responses from a community health survey, open to all residents of the assessment area, as well as focus groups conducted with stakeholders and with target populations. The target populations are defined as underserved/vulnerable populations disproportionately impacted by the social determinants of health, including poverty, race/ethnicity, education, and/or lack of insurance.

Step 2: Strategic Planning

After the completion of the CHA, the CHAT enters the strategic planning phase of the process. First, the CHAT must decide what community health needs to focus on and provide explanation as to what issues will be the focus and why. To help with this determination, the CHAT participates in an activity charting the top priorities on an axis, based on the feasibility and potential impact of solutions that could be implemented locally to address these issues.

After the priority areas (needs) have been identified, the team participates in strategic planning. Break-out session format is used for the planning session. CHAT members spend the strategic planning session developing a framework of goals and strategies to use as a starting point for a planning retreat in the coming summer and fall. In future strategic planning sessions, FOCUS members will identify alignment opportunities between organizations and system changes that are likely to lead to improvement, establish measures that will tell if changes are leading to improvement, and select new or existing evidence-based strategies for the community that are most likely to succeed in addressing the needs.

¹⁵ Science of Improvement: How to Improve. (2014). Institute for Healthcare Improvement. Retrieved from <http://www.ihi.org/resources/Pages/HowtoImprove/ScienceofImprovementHowtoImprove.aspx>

Step 3: Implementation Strategy

After the CHA is completed, Carilion Clinic develops a written Implementation Strategy that specifies what health needs were identified in the CHA, what needs the organization plans to address and what needs the organization does not plan to address and reasons for each.

Included in the document are expected outcomes for each community issue being addressed and proposed evidence-based interventions with goals and objectives that will be tracked over time (both process and outcome measures). The document must be formally approved by the organization's Board of Directors and filed on the organization's 990 tax return. Carilion Clinic will integrate the implementation strategy with existing organizational and community plans.

Step 4: Program Implementation

Carilion Clinic Community Health & Outreach and the CHAT will establish and monitor new and ongoing community health programs implemented to respond to the community health needs identified in the CHA. New programs will be piloted on a small scale first and will be continually assessed and improved using the PDSA cycle¹⁶. The goal of the PDSA cycle is to make small, sustained improvements over time. Relevant data are collected and analyzed for each program.

After successful implementation of the pilot, the program can be implemented on a larger scale throughout Carilion Clinic or with other organizations in the community. The PDSA cycle is ongoing for existing community health improvement programs.

Step 5: Evaluation

Community health programs and metrics associated with the expected outcome in the implementation strategy will be monitored by Carilion Clinic Community Health and Outreach.

Progress will be reported to CGCH's Board of Directors from time to time, which may include periodic updates in the Administrator's Report throughout the year, for each community health need identified in the last CHA cycle.

In addition, the Board will be informed of community grant awards given by the hospital to fund health safety net programs in the community. Decisions on funding of health safety net programs will be based on available resources and the impact on addressing a documented community health need identified in the CHA. For more information, see <https://www.carilionclinic.org/community-health-outreach>.

Finally, Carilion Clinic will update progress made on each community health need identified in the most recent CHA cycle annually on the organization's 990 tax form.

¹⁶ Plan-Do-Study-Act (PDSA) Cycle (2008).

Retrieved from: <https://innovations.ahrq.gov/qualitytools/plan-do-study-act-pdsa-cycle>

Data Collection

The CHAT leads the assessment and oversees primary and secondary data collection. Beginning in October 2017, primary data collection included a Community Health Survey, focus groups with key stakeholders and providers, and focus groups with target populations. Secondary data were collected, including demographic and socioeconomic indicators, as well as health indicators addressing access to care, health status, prevention, wellness, risky behaviors and the social environment.

Community Health Survey (CHS): The CHS consists of 38 questions for adults, age 18 and older, about access and barriers to healthcare, general health questions, and demographic information. The survey mirrors Healthy People 2020 goals, as well as many other national health surveys that do not collect health care data at the zip code level. This survey is not a scientific survey and the survey method uses oversampling techniques of the target population (please see Appendix 4 for Carilion Giles Community Hospital's CHS). Efforts are made to keep as many questions consistent from the previous CHS for result trending purposes. An incentive for completing the CHS was provided to encourage participation.

Focus Groups: Focus groups are conducted with many groups of individuals in an effort to best understand health in the Giles County area. The goal of the focus groups is to identify barriers to care and gaps in services for primary care, dental and mental health/substance use services for the population. An effort was made to meet with groups representing each lifecycle (parents and women of child-bearing age, adults, and the elderly) living in MUAs. We strive to target our assessment of health care and barriers for those underserved and vulnerable populations disproportionately impacted by the social determinants of health. Information provided by focus groups was analyzed to understand themes of group responses.

For each group, there were no more than 15 participants. A facilitator and scribe conducted each focus group meeting and the audio of the meetings were recorded and later transcribed to be analyzed. In order to contribute, participants signed consent forms prior to each meeting agreeing on the format of the meeting, how information would be used and to ensure confidentiality. The groups were held in convenient, neutral locations and/or in sites where participants already congregate. Snacks and beverages were provided.

The script for the focus groups is simple and consists of six open-ended questions, as detailed below:

1. In one or two words, how would you describe good health?
2. Looking at this list, what things do you need to have good health like what we've described?
Do you have these things?
3. What do you, or your family and friends, do when you need a check-up or are sick?
4. What do you, or your family and friends, do when you have a toothache or need your teeth cleaned?
5. What do you, or your family and friends, do when you need to talk to someone about your nerves/stress/depression or need help with alcohol or drug use?

6. Is there anything else you would like to tell us about your health or the health of others in the Giles County Area?

Stakeholder Survey: A six-question, open-ended survey is collected from key community stakeholders with insight into the health of the community, more specifically of those in target populations. Stakeholders are identified by the CHAT or by the Project Management Team.

Prioritization

After all primary and secondary data collection is complete, the CHAT reviews all data and participates in a prioritization activity. This activity consists of each CHAT member picking the ten most pertinent community needs and ranking them on a scale of one to ten, with one being the most pertinent. The categories listed on the prioritization activity sheet align with the Robert Wood Johnson Foundation framework for what influences health (please see Appendix 3 to view the prioritization worksheet). The data are combined and priorities are selected based on the number of times a category is selected in the top 10, with average ranking serving as a tie-breaker. Once the priorities have been selected, the CHAT participates in an activity to rate the feasibility and potential impact of a solution to each health issue.

Robert Wood Johnson Foundation Framework

According to the Robert Wood Johnson Foundation's (RWJF) County Health Rankings¹⁷, where an individual lives, works and plays is a strong predictor of their health outcomes. Currently in the United States, a person's zip code can help predict their life expectancy due to its direct link to the social determinants of health such as poverty, race/ethnicity, education and employment status in these areas¹⁸. These factors are so important to our overall health, that they were added to the 10-year national Healthy People 2020 objectives with a goal to "create social and physical environments that promote good health for all"¹⁹.

Carilion responds to community health needs in innovative ways: making sure our regions have access to state-of-the-art healthcare close to home; providing community grants and sponsorships to extend our mission and support other organizations that address health need; creating and implementing community-wide strategies to reduce barriers, coordinate resources and enhance community strengths; and by providing community-based health and wellness programming.

Our community-based programs and community grants are categorized using the RWJF framework for what influences health: health behaviors; social and economic factors; clinical care access and quality; and physical environment²⁰. We measure our success by tracking related indicators at the regional, local, and zip code level, as well as by monitoring change and improvement in the County Health Rankings of our municipalities.

Target Population

The target population for Carilion Clinic's CHA projects consists of the following groups: underserved/vulnerable populations disproportionately impacted by the social determinants of health including poverty, race/ethnicity, education, and/or lack of insurance. Populations are examined across the different life cycles including parents of children and adolescents, women of child-bearing age, adults, and the elderly as well as across various race and ethnic groups.

Community Health Assessment Findings

The finding of the 2018 GCACHA revealed 10 priority health-related issues in the community, identified by the CHAT after review of the data collected.

1. Alcohol and drug use
2. Child abuse / neglect
3. Transportation / transit system
4. Poor diet
5. Access to mental / behavioral health services
6. Access to specialty care (general)
7. Lack of health literacy / lack of knowledge of healthy behaviors
8. Access to substance use services
9. Culture: healthy behaviors not a priority
10. Lack of exercise

The results of the assessment reflected a variety of social determinant of health factors, showing the understood impact that these factors have on overall health. The findings revealed distinct disparities in health for those living in poverty. As in years past, the Giles and Monroe counties vary in health factors and social determinants, but generally perform worse than the Commonwealth of Virginia as a whole. Academic attainment rates were lower as was median household income, more children are eligible for free and reduced lunch, and unemployment rates, while improving, are still lagging the statewide and national averages, impacting the social determinants of health.

Many of the respondents to the Community Health Survey and focus group participants, whether insured or uninsured, noted that the cost of care keeps them from accessing preventive care and services. Survey responses revealed “Cost” to be the top reason that people feel prevents them from getting the healthcare they need.

Stakeholders identified lack of transportation as the biggest issue that impacts health, followed by substance use. Lack of transportation was also identified as the biggest barrier to health, followed by lack of insurance. 100% of target population focus groups also brought up access to transportation in discussions.

According to the American Community Survey (ACS), 31.5% of people in Giles County and 45% of people in Monroe County, WV, live below 200% of the Federal Poverty Level (FPL) compared to 26.5% for the Commonwealth of Virginia²¹. This rate is even higher for children in both Giles and Monroe counties.

²¹ U.S. Census Bureau, 2012-2016 5-year estimates, American Community Survey, Table C17002.

https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_16_5YR_C17002&prodType=table

The rate of poverty can be seen through free and reduced lunch qualifications in school systems. As a whole in the 2017/2018 school year, 47% of students in Giles County qualified²².

Graduation rates in Giles County have improved overall in the last couple of years, but still fell shy of the state average of 91.3% in 2017 at 89.9%²³. Narrows High School outperformed the state rate while Giles High School underperformed. When evaluating the academic attainment rates for the population 25 and over, Giles County and Monroe County have lower overall education levels than the Commonwealth of Virginia rate of 88.6% of residents with a high school degree or higher and 36.9% with a Bachelor's degree or higher. In Giles, an average of 85.2% of people have a high school degree or higher and 15.9% have a Bachelor's degree or higher. Monroe County compares at 81.4% with a high school degree or higher and 13.4% with a Bachelor's degree or higher²⁴.

When asked about the most important issues that affect health in our community, 58.1% of survey respondents answered "alcohol and illegal drug use," followed by 39.1% answering "cancer," and 38.2% answering "obesity/overweight." Stakeholders responded that substance use and transportation were the most important issues.

The Virginia Department of Health reports that in 2016, the emergency department (ED) opioid overdose rate was 130.5 overdoses per 100,000 people in Giles County. This compares to the state ED opioid overdose rate of 103.5 overdoses per 100,000 population²⁵. The Commonwealth of Virginia, along with many other states, has declared opioid addiction to be a public health emergency and the health commissioner has issued a standing order making Naloxone available to any resident to treat an overdose²⁶.

Narcan (Naloxone) use rates have been significantly lower than the state average in Giles County at 5.9 per 100,000 population according to Virginia Department of Health data. Fatal prescription overdose rates have been worse than the state rate of 5.5 per 100,000 at 11.9 per 100,000 population²⁷. The CHAT prioritized "alcohol and drug use" as the top health need, recognizing the significance of this crisis in our region.

When asked what health care services are hard to get in our community, survey respondents answered that "cancer care" (39%) was the most challenging to access, followed by "adult dental care" (32.4%), "specialty care" (32.2%), "mental health / counseling services" (30.8%) and "substance abuse services for drugs and alcohol" (28.1%).

Community Impact

Response Since 2015 GCACHA

Carilion Clinic responds to community health needs in innovative ways: making sure our regions have access to state-of-the-art healthcare close to home; providing community grants and sponsorships to extend our mission and support other organizations that address health need; creating and implementing community-wide strategies to reduce barriers, coordinate resources and enhance community strengths; and by providing community-based health and wellness programming.

Our community-based programs and community grants are categorized by using the RWJF framework for what influences health: health behaviors; social and economic factors; clinical care access and quality; and physical environment.

In response to the health needs that were identified in the 2015 CGACHA, Community Health and Outreach hired a part-time Health Educator to serve the Giles County area. Since fall of 2015, the hospital has provided 118 holistic health events that included a variety of health education, health screenings and immunizations that reached 3,108 people. In addition, the hospital has started a Better Breathers Club and a diabetes support group. CGCH also gave four community grants that reflect the RWJF framework and address wellness, transportation, and access to services, and child abuse prevention.

To address tobacco use, CGCH provided education about tobacco dangers in partnership with the Giles Youth Adult Partnership, expanded the 1-800-QUIT-NOW program, and held trainings with staff and physicians about smoking cessation. The hospital addressed substance abuse by enrolling Emergency Department physicians in the Commonwealth of Virginia's prescription monitoring program, adopted new guidelines for narcotic prescribing, and updated pain management guidelines.

Carilion and community partners have worked hard improve access to services in the area. To increase access to mental health, CGCH is piloting tele-psychology at the Giles clinic and added infrastructure in the emergency department. To improve access to dental care, the hospital has increased awareness about dental services offered by the Community Health Center of Giles and provides referrals to these services. CGCH is also expanding specialty care by building a new addition to the hospital, which is currently underway, that will provide specialty services.

Carilion also created physical fitness opportunities for staff by building a fitness studio at the hospital and encourages and provides wellness opportunities for staff.

Success Measures

As a result of Carilion Clinic, the New River Health District, FOCUS partners' investments and the coordinated programming of community organizations, RWJF County Health Factor Rankings have improved overall from 2016 -2018 for Giles County.

In addition to County Health Rankings, Carilion Clinic monitors program outcomes for internal health programming, as well as for grant funded programs. A scorecard is being created to track specific secondary, primary, and program outcome indicators.

The analysis below shows directional trends between the 2015 and 2018 CHS results.

* Denotes significant change from 2015 measurement.

Right direction:

- Using dental care services *
- Having eye exam in past 12 months
- Having dental exam in past 12 months
- ED visit in past 12 months
- Affording medicine needed for health conditions
- Having a colonoscopy
- Having a mammogram
- Neighborhood supporting healthy eating
- Easy to get affordable fresh fruits and vegetables
- Time since last doctor check-up
- Having enough money for food for family
- Time since last dental clinic visit
- Having health insurance *
- Being told by a doctor that you have:
 - Depression or anxiety *
 - High blood pressure
 - Obesity / Overweight
 - High cholesterol
 - High blood sugar or diabetes
 - Mental health problems

Wrong direction:

- Taking medicine doctor tells me to
- Having a Pap smear
- Neighborhood supporting physical activity
- Being told by a doctor that you have:
 - Asthma

2018 Community Health Assessment Data

Primary Data and Community Engagement

Stakeholder Survey Results

Throughout the CHA process, community stakeholders, leaders, and providers were encouraged to complete the Stakeholder Survey (Appendix 5: Stakeholder Survey). This survey provided an additional perspective to the needs and barriers to health facing our community. Stakeholder focus groups were held in addition to Stakeholder Survey distribution, to ensure all responses were captured. The survey was available online and in print, and was distributed at meetings and focus groups.

In total, **53** surveys were completed:

30 online surveys

23 print surveys

3 focus groups

Stakeholders identified lack of transportation as the biggest issue that impacts health, followed by substance use. Lack of transportation was also identified as the biggest barrier to health, followed by lack of insurance. Though access to services was frequently identified as an important issue impacting health, socioeconomic factors were more apparent as barriers to these healthy services.

The entire area and outlying areas were both identified as localities with the greatest unmet need. The population groups identified with the greatest unmet need were the elderly, closely followed by young adults, and those with low income.

Respondents identified increasing access to transportation as the biggest change the community could make to meet the needs and reduce the barriers to health. Education was the second most frequent response.

Stakeholders were asked the following questions. Main themes, subcategories, and percent of respondents that identified them are graphed.

1. What are the most important issues (needs) that impact health in your community?

Main themes, subcategories, and percent of respondents that identified them:

Access to services:

Socioeconomic needs:

Health behaviors:

Health outcomes:

Total respondents: 52

2. What are the barriers to health for the populations you serve?

Main themes, subcategories, and percent of respondents that identified them:

Access to services:

Socioeconomic barriers:

Health behaviors:

Total respondents: 52

3. Is there one locality / neighborhood with the greatest unmet need?

Main themes and percent of respondents that identified them:

Total respondents: 30

4. Is there one population group with the greatest unmet need?

Main themes and percent of respondents that identified them:

Total respondents: 42

5. What are the resources for health for the populations you serve?

AA	Giles Health and Family Center
Adult daycare transportation	Giles Senior Center
Agency on Aging	Head Start
Cardiac rehab maintenance program	Health Department
CareMap program	Home health
Carilion Charity Care	Lion's Club
Carilion Clinic	LogistiCare
Children recreation programs	Meals on Wheels
CHIP	Medicaid/Medicare
Christian Mission	Monroe Health Clinic
Churches	New Life Recovery
Community Health Center	New River Valley Community Action
Community nursing outreach	New River Valley Community Center
Department of Social Services	New River Valley Community Services
Dialysis centers	NRV Cares
Empowergize class at CGCH	Rotary Club
EMT	Senior walking trails
Family practice offices	SNAP
FMRS Health Systems	Urgent Care
Focus On Communities Utilizing Services (FOCUS)	Virginia Cooperative Extension
Giles County Public Schools	Virginia Department for Aging and Rehabilitative Services
Giles County Wellness Center	WIC
Giles Free clinic	

6. If we could make one change as a community to meet the needs and reduce the barriers to health, what would that be?

Main themes, subcategories, and percent of respondents that identified them:

Total respondents: 46

Target Population Focus Group Results

Target population focus groups were conducted to capture the needs and barriers to health for the uninsured, underinsured, low-income, minority, senior, and chronically ill populations. Focus group locations were chosen based on their service to target populations, and where existing groups already met.

Two target population focus groups were held and were asked questions related to needs and barriers to health, and access to primary, oral, and mental health care.

Focus group locations:

Giles County Senior Center:

The Giles Senior Center works with locals to bring their seniors up to the minute information on classes, health screenings, recreational opportunities, and trips that help with enhancing their lives.

For more information, visit: <http://virginiasmtnplayground.com/seniors/>

Community Health Center of NRV, Pearisburg:

The Community Health Center of the New River Valley has provided over 30 years of medical and dental services to the area, and serves people of all ages and circumstances, regardless of ability to pay.

For more information, visit: <http://chcnrv.org/>

Focus Group Responses

To begin the focus groups, attendees were asked to describe good health. A word cloud was created to show results; the larger the word is in the cloud, the more a term was used.

1. In one or two words, how would you describe good health?

Responses from the rest of the questions revealed that focus groups were aware of the many factors that influence good health- not just clinical care, but socioeconomic factors as well. These social needs can limit access to services and encourage home remedies or neglect in place of preventive and regular care.

Though socioeconomic factors can impede good health, relying on the support of family and friends was frequently discussed regarding physical and mental health care. Focus group attendees often relied as much on social support as clinical care. One focus group attendee described this of their community, saying *“I love this county. I have my coworkers, friends, church group, and family- I feel like I have a large support group. People don’t just call you and check up on you everywhere else.”*

Long wait times, challenges with pain management, access to care, and lack of transportation were also common themes. Though these and many other barriers exist, attendees recognized the need for a comprehensive approach to health, including socioeconomic factors, healthy behaviors, access to clinical care, and a healthy environment.

2. Looking at this list, what things do you need to have good health like what we've described?

Main themes and percent of focus groups that identified them:

Subcategories of main themes:

Social needs:

- Safety
- Money
- Support
- Social activities
- Acceptance of mental health issues

Healthy behaviors:

- Exercise
- Motivation
- Knowledge
- Good attitude
- Take vitamins
- Affordable, healthy food
- Personal prioritization of health

Access to services:

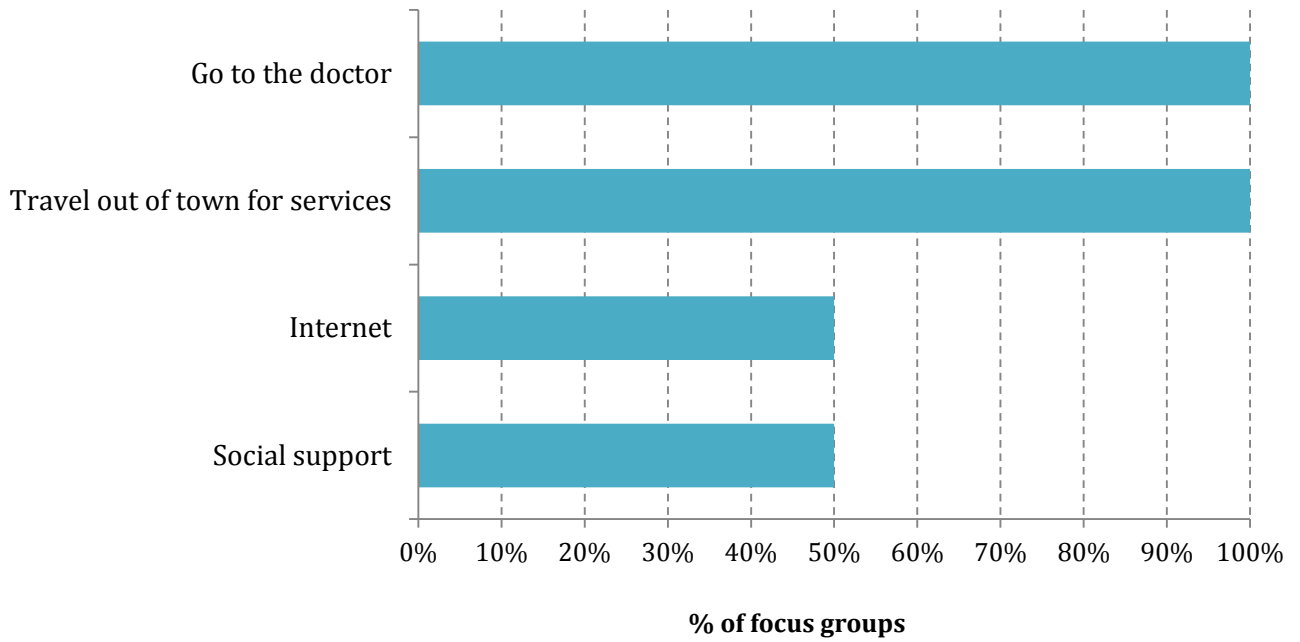

- Local care
- Transportation
- Access to medication
- Access to care- substance use treatment

Environmental health:

- Good home
- Clean water

3. What do you, or your family and friends, do when you need a check-up or are sick?

Main themes and percent of focus groups that identified them:

Subcategories of main themes:

Go to the doctor:

- UVA
- Urgent Care
- Carilion Clinic
- Emergency room
- Health Department
- Community Health Center

Social support:

- Go to church
- Call family / friends

4. What do you, or your family and friends, do when you have a toothache or need your teeth cleaned?

Main themes and percent of focus groups that identified them:

Subcategories of main themes:

Go to dentist:

Community Health Center

Home remedies:

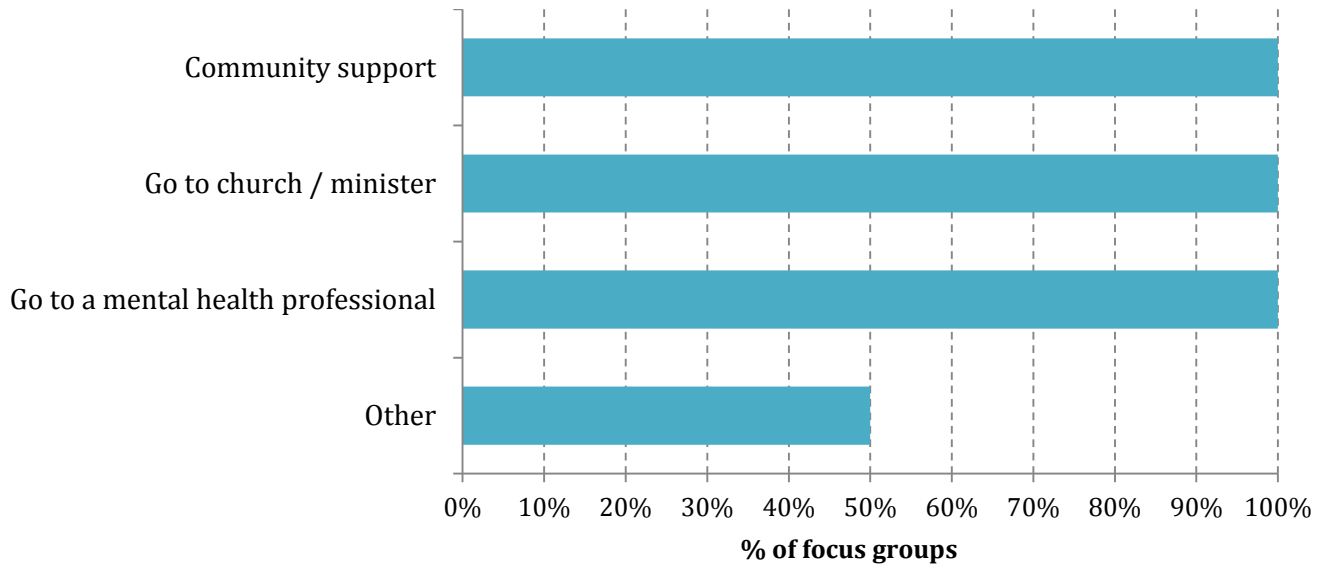

Oil of clove

OTC medication

Pull teeth yourself

5. What do you, or your family and friends, do when you need to talk to someone about your nerves / stress / depression or need help with alcohol or drug abuse?

Main themes and percent of focus groups that identified them:

Subcategories of main themes:

Community support:

- AA
- Peer support groups
- Talk to family / friends

Go to a mental health professional:

- St. Albans
- Carilion Clinic
- Emergency room
- Community Health Center
- Counseling through Virginia Tech students

Other:

- Call hotlines
- Sheriff's office
- Bethany Hall, Roanoke

6. Is there anything else you would like to tell us about your health or the health of others in the Giles County area?

Main themes and percent of focus groups that identified them:

Other responses:

- Stigma
- Obesity
- Diabetes
- Chronic disease
- Abuse of the system
- Coordination of care
- No places to exercise
- Lack of support groups
- Lack of physical activity
- Knowledge of resources
- Lack of swimming facility
- Affordability of healthcare/medication
- Finding doctors that accept certain insurance

Giles County Area Community Health Survey Results

A Community Health Survey was conducted as part of the Giles County Area Community Health Assessment. This survey was used to evaluate the health of the community and identify potential geographic areas to target improvements. Input and oversight of survey development was provided by the Community Health Assessment Team (CHAT).

A 38-question survey instrument was developed that asked questions about socioeconomic factors, access to medical, dental, and mental health care, healthy behaviors, physical environment, health outcomes, and demographics. The survey instrument included commonly used questions and metrics from the following established community surveys:

- Community Themes and Strengths Assessments, National Association of County and City Health Officials (NACCHO), Mobilizing for Action through Planning and Partnerships (MAPP)
- Community Healthy Living Index, YMCA
- Behavioral Risk Factor Surveillance System, Centers for Disease Control (CDC)
- National Health Interview Survey, Centers for Disease Control (CDC)
- Youth Risk Behavior Surveillance System, Centers for Disease Control (CDC)
- Martin County Community Health Assessment, Martin County, North Carolina
- Previous Giles County Area Community Health Surveys

Both an English and Spanish version of the survey was available (Appendix 4: Community Health Survey).

The CHAT identified target populations, collection sites, and methods of survey distribution. The population of interest for the survey was Giles County area residents 18 years of age and older. The Giles County area included the CHA service area: Giles County, VA and Monroe County, WV. The following subpopulations were especially targeted for sampling:

- Underserved/vulnerable populations disproportionately impacted by the social determinants of health including:
 - Poverty
 - Race/ethnicity
 - Education
 - Lack of insurance

A non-probability sample method was used, where respondents were not randomly selected. Although the survey was available to all residents living in the Giles County area, oversampling of the targeted subpopulations occurred through specific outreach efforts. Oversampling of the targeted subpopulation ensured that needs and assets specific to this subpopulation of interest were captured.

Surveys were distributed in October 2017 through February 2018. Over 10 organizations, agencies, and community members assisted in the distribution of the survey. A drawing for a \$50 grocery gift card for those who completed the survey was offered as an incentive.

The survey instrument was available via the following methods:

- Survey Monkey link (www.surveymonkey.com/r/2018CHA)
- Phone line (888-964-6620)
- Paper surveys (collected by volunteers and/or staff of partner agencies)

Outreach strategies for survey distribution included:

- Media coverage by the local television and newspaper announcing the URL for the survey
- Facebook
- Face-to-face survey interviews at sites / agencies that serve the target populations using volunteers and/or staff
- Flyers and posters distributed throughout the community with survey URL and phone line information
- Survey URL posted on partner agency websites

In total, **481** surveys were collected:

304 paper surveys

176 online surveys

1 phone surveys

All responses were entered into Survey Monkey by survey respondents or by Carilion Direct who entered responses from paper or phone surveys. Surveys were analyzed and reported using Survey Monkey and Microsoft Excel.

If you do not drive, what mode of transportation do you typically use?

Secondary Data

Secondary data were collected to obtain a more comprehensive description of our community that goes beyond the scope of the primary data collected throughout the Community Health Assessment process. Relevant information from existing data sources validates the trends seen in primary data collection, but also provides more detailed descriptive information on the characteristics of our community.

These population-level measures come from secondary sources such as:

- The American Community Survey, U.S. Census Bureau
- Behavioral Risk Factor Surveillance System, Center for Disease Control
- County Health Rankings, Robert Wood Johnson Foundation
- Virginia Department of Health
- Virginia Department of Education

The demographic data presented first define the Giles County area by population counts, age, income, race/ethnicity, etc. The subsequent sections are organized by Robert Wood Johnson Foundation's County Health Rankings Model. Health factors are presented first and include social and economic factors, health behaviors, clinical care, and physical environment. Health outcomes close the secondary data section and include measures on disease status and quality of life.

Data are presented by county or smallest available geographic area, and include census tracts from the MUAs when applicable. State and national level data are also included for comparison when available.

Links and references to other community health assessments and data can be found in Appendix 8.

Appendix 3: Community Health Need Prioritization

Community Health Assessment Prioritization

From the entire list, please pick 10 of the most pertinent community needs and rank on a scale of 1 - 10, with 1 being the most pertinent.

Rank	Community Issue
Health Behavior Factors	
	Alcohol and drug use
	Culture: healthy behaviors not a priority
	Lack of exercise
	Lack of health literacy / lack of knowledge of healthy behaviors
	Lack of knowledge of community resources
	Poor diet
	Risky sexual activity
	Tobacco use
Clinical Care Factors	
	Access to primary care
	Access to dental care
	Access to mental / behavioral health services
	Access to specialty care (general)
	Access to specific specialty care: _____ (write in)
	Access to substance use services
	Communication barriers with providers
	Coordination of care
	High cost of care
	High uninsured / underinsured population
	Quality of care
Social and Economic Health Factors	
	Child abuse / neglect
	Community safety / violence
	Domestic violence
	Educational attainment
	Lack of family / social support systems
	Poverty / low average household income
	Unemployment
Physical Environment Factors	
	Air quality
	Affordable / safe housing
	Injury prevention / safety of environment
	Outdoor recreation
	Transportation / transit system
	Water quality
Health Outcomes	
	High prevalence of chronic disease (general)
	High prevalence of specific chronic disease: _____ (write in)

4. What do you think are the five most important issues that affect health in our community? (Please check five)

- | | | |
|--|---|--|
| <input type="checkbox"/> Access to healthy foods | <input type="checkbox"/> Environmental health (e.g. water quality, air quality, pesticides, etc.) | <input type="checkbox"/> Not getting "shots" to prevent disease |
| <input type="checkbox"/> Access to affordable housing | <input type="checkbox"/> Gang activity | <input type="checkbox"/> Not using seat belts / child safety seats / helmets |
| <input type="checkbox"/> Accidents in the home (e.g. falls, burns, cuts) | <input type="checkbox"/> Heart disease and stroke | <input type="checkbox"/> Overweight / obesity |
| <input type="checkbox"/> Aging problems | <input type="checkbox"/> High blood pressure | <input type="checkbox"/> Poor eating habits |
| <input type="checkbox"/> Alcohol and illegal drug use | <input type="checkbox"/> HIV / AIDS | <input type="checkbox"/> Prescription drug abuse |
| <input type="checkbox"/> Bullying | <input type="checkbox"/> Homicide | <input type="checkbox"/> Sexual assault |
| <input type="checkbox"/> Cancers | <input type="checkbox"/> Infant death | <input type="checkbox"/> Stress |
| <input type="checkbox"/> Cell phone use / texting and driving / distracted driving | <input type="checkbox"/> Lack of exercise | <input type="checkbox"/> Suicide |
| <input type="checkbox"/> Child abuse / neglect | <input type="checkbox"/> Lung disease | <input type="checkbox"/> Teenage pregnancy |
| <input type="checkbox"/> Dental problems | <input type="checkbox"/> Mental health problems | <input type="checkbox"/> Tobacco use / smoking |
| <input type="checkbox"/> Diabetes | <input type="checkbox"/> Neighborhood safety | <input type="checkbox"/> Unsafe sex |
| <input type="checkbox"/> Domestic violence | | <input type="checkbox"/> Other: _____ |

5. Which health care services are hard to get in our community? (Check all that apply)

- | | | |
|--|--|---|
| <input type="checkbox"/> Adult dental care | <input type="checkbox"/> End of life / hospice / palliative care | <input type="checkbox"/> Programs to stop using tobacco products |
| <input type="checkbox"/> Alternative therapy (e.g. herbal, acupuncture, massage) | <input type="checkbox"/> Family doctor | <input type="checkbox"/> Specialty care (e.g. heart doctor) |
| <input type="checkbox"/> Ambulance services | <input type="checkbox"/> Family planning / birth control | <input type="checkbox"/> Substance abuse services –drug and alcohol |
| <input type="checkbox"/> Cancer care | <input type="checkbox"/> Immunizations | <input type="checkbox"/> Urgent care / walk in clinic |
| <input type="checkbox"/> Child dental care | <input type="checkbox"/> Inpatient hospital | <input type="checkbox"/> Vision care |
| <input type="checkbox"/> Chiropractic care | <input type="checkbox"/> Lab work | <input type="checkbox"/> Women’s health services |
| <input type="checkbox"/> Dermatology | <input type="checkbox"/> Medication / medical supplies | <input type="checkbox"/> X-rays / mammograms |
| <input type="checkbox"/> Domestic violence services | <input type="checkbox"/> Mental health / counseling | <input type="checkbox"/> None |
| <input type="checkbox"/> Eldercare | <input type="checkbox"/> Physical therapy | <input type="checkbox"/> Other: _____ |
| <input type="checkbox"/> Emergency room care | <input type="checkbox"/> Preventive care (e.g. yearly check-ups) | |

6. What do you feel prevents you from getting the healthcare you need? (Check all that apply)

- | | | |
|---|---|--|
| <input type="checkbox"/> Afraid to have check-ups | <input type="checkbox"/> Don’t like accepting government assistance | <input type="checkbox"/> Language services |
| <input type="checkbox"/> Can’t find providers that accept my Medicaid insurance | <input type="checkbox"/> Don’t trust doctors / clinics | <input type="checkbox"/> Location of offices |
| <input type="checkbox"/> Can’t find providers that accept my Medicare insurance | <input type="checkbox"/> Have no regular source of healthcare | <input type="checkbox"/> Long waits for appointments |
| <input type="checkbox"/> Childcare | <input type="checkbox"/> High co-pay | <input type="checkbox"/> No health insurance |
| <input type="checkbox"/> Cost | <input type="checkbox"/> Lack of evening and weekend services | <input type="checkbox"/> No transportation |
| <input type="checkbox"/> Don’t know what types of services are available | | <input type="checkbox"/> I can get the healthcare I need |
| | | <input type="checkbox"/> Other: _____ |

GENERAL HEALTH QUESTIONS

7. Please check one of the following for each statement

	Yes	No	Not applicable
I have had an eye exam within the past 12 months.	<input type="checkbox"/>	<input type="checkbox"/>	
I have had a mental health / substance abuse visit within the past 12 months.	<input type="checkbox"/>	<input type="checkbox"/>	
I have had a dental exam within the past 12 months.	<input type="checkbox"/>	<input type="checkbox"/>	
I have been to the emergency room in the past 12 months.	<input type="checkbox"/>	<input type="checkbox"/>	
I have been to the emergency room for <u>an injury</u> in the past 12 months (e.g. motor vehicle crash, fall, poisoning, burn, cut, etc.).	<input type="checkbox"/>	<input type="checkbox"/>	
I have been a victim of domestic violence or abuse in the past 12 months.	<input type="checkbox"/>	<input type="checkbox"/>	
My doctor has told me that I have a long-term or chronic illness.	<input type="checkbox"/>	<input type="checkbox"/>	
I take the medicine my doctor tells me to take to control my chronic illness.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I can afford medicine needed for my health conditions.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I am over 21 years of age and have had a pap smear in the past three years (if male or under 21, please check “Not applicable”).	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I am over 40 years of age and have had a mammogram in the past 12 months (if male or under 40, please check “Not applicable”).	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
I am over 50 years of age and have had a colonoscopy in the past 10 years (if under 50, please check “Not applicable”).	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Does your neighborhood support physical activity? (e.g. parks, sidewalks, bike lanes, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	
Does your neighborhood support healthy eating? (e.g. community gardens, farmers’ markets, etc.)	<input type="checkbox"/>	<input type="checkbox"/>
